PRIMARY EXAMINER

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

2. Claims 1-25 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The prior art of record neither suggest nor renders obvious the instant combination in a lead screw adjustment structure of a disc drive to adjust a lead screw comprising an incorporated elastic member installed on the pickup deck to apply an elastic force in an upward direction and an axial direction to one end portion of the lead screw; and an adjustment screw, disposed above the elastic member, which adjusts the end portion of the lead screw up and down, when the adjustment screw is rotated as set forth in independent claim 1.

The prior art of record neither suggest nor renders obvious the instant combination in a lead screw adjustment structure of a disc drive, comprising a lead screw having first and second ends, an elastic member, to apply elastic forces in radial and axial directions to one of the ends of the lead screw as set forth in independent claim 11.

The prior art of record neither suggest nor renders obvious the instant combination in an adjustable elastic member apparatus to adjust the attitude and location of a lead screw relative to a disc surface, comprising a guide, through which an end of the lead screw extends, to guide

vertical movement of the lead screw; a support on an underside of the deck, having an abutting end, into which the end of the lead screw fits, and a supporting end which extends lower than the connection portion; an adjustment screw to penetrate the deck and to contact an upper side of the support; and an elastic member having a base fitted to the supporting end of the support, a first pressing portion coupled to the base portion, to exert a vertical elastic force on an underside of the support, and a second pressing portion to exert an axial elastic force on the end of the lead screw as set forth in independent claim 24.

The prior art of record neither suggest nor renders obvious the instant combination in an elastic member apparatus to adjust the attitude and location of a lead screw relative to a disc surface, having a guide, through which an end of the lead screw extends, to guide vertical movement of the lead screw, and a support on an underside of the deck, having an abutting end, through which the end of the lead screw tightly extends, and a supporting end which extends lower than the connection portion, the elastic member comprising an adjustment screw to penetrate the deck and to contact an upper side of the support; a base of an elastic member, fitted to the supporting end of the support; a first pressing portion coupled to the base portion, to exert a vertical elastic force on an underside of the support; and a second pressing portion to exert an axial elastic force on the end of the lead screw as set forth in independent claim 25.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
